BROADSOFT HIP SERVICE

“Our company was in need of a new telephone system to accommodate our company at a new location. BTC Teleconsult was contacted and proved up to the challenge. They not only provided a suitable solution that fit our needs and would expand with our company, they also offered all information, support, and training in English. This put BTC Teleconsult front of all other suppliers/competitors.

During the planning phase of our major upgrade, BTC Teleconsult provided a tour of the facility that would host our phone system. This gave me confidence to know that our phone system is safe and secure. Our phone system is Mission Critical and the quality of service shown by BTC Teleconsult has given our company peace of mind. BTC Teleconsult is proactive and monitors our phone traffic to address any issues before they cause any problems.

The support that BTC Teleconsult offers is truly fantastic. Fast turn around of any issues and BTC Teleconsult staff always keeps us informed with clear explanations. The support staff are always friendly and even if they are busy they find time to help us with any problem big or small.

BTC Teleconsult is now both our mobile provider as well as our land line provider. They are our one source for all things communication.”
